

# Baldur's Gate 3 - Party Limit Begone Mod Guide

## Baldur's Gate 3 - Party Limit Begone Mod Guide

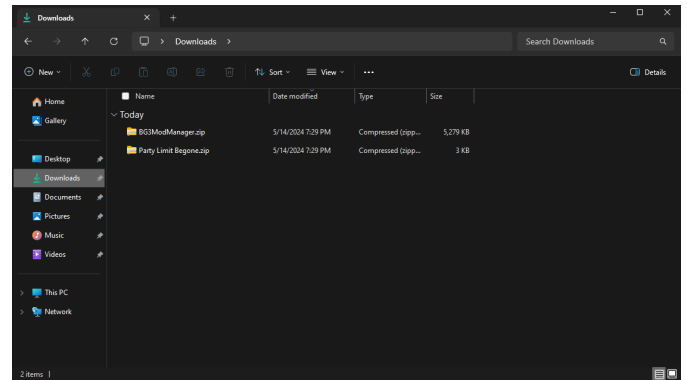

Step 1: Download the files to the right first!

[PartyLimitBegone.zip](#)

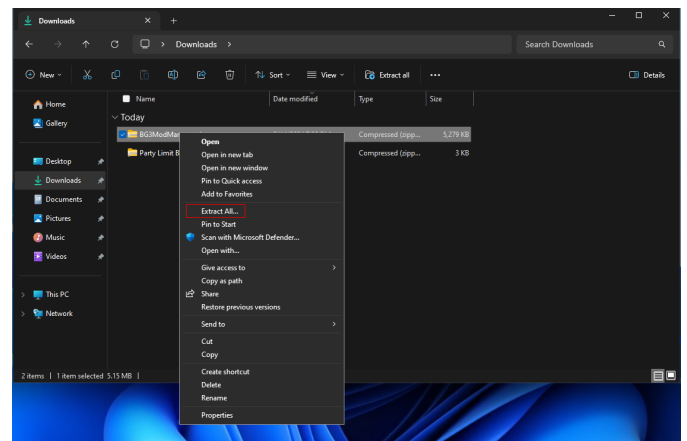

[BG3ModManager.zip](#)

Step 2: After downloading the files, navigate to your download folder. This should be located here:

FYI, if you changed your downloads folder for your browser, it will be located in that directory.

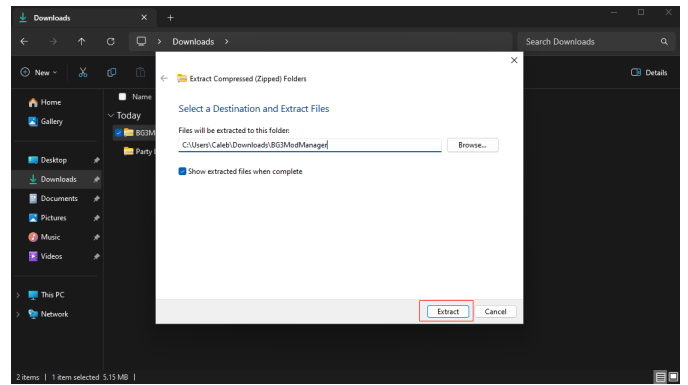

Step 3: Right click on BG3ModManager.zip and choose **Extract All...**

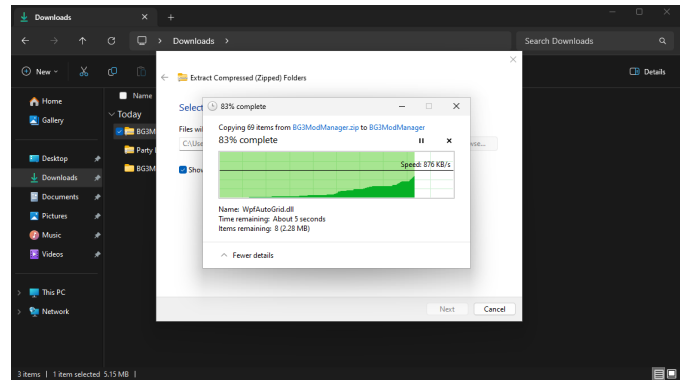

Step 4: Click on Extract and this will extract into your Downloads folder.

Note: You can change where it extracts by clicking on **Browse...**

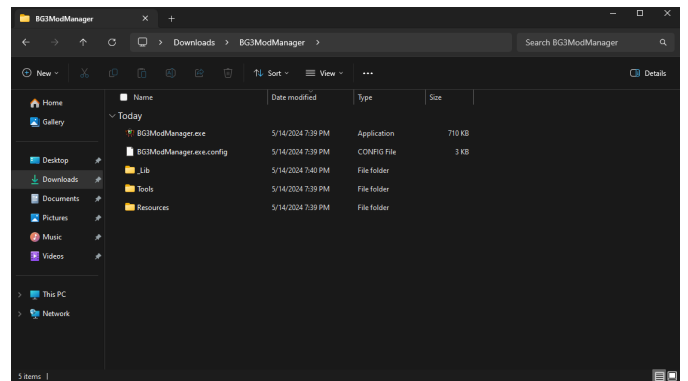

It does not matter where you extract this to, but I would suggest keeping it simple and extracting it into your Downloads folder.

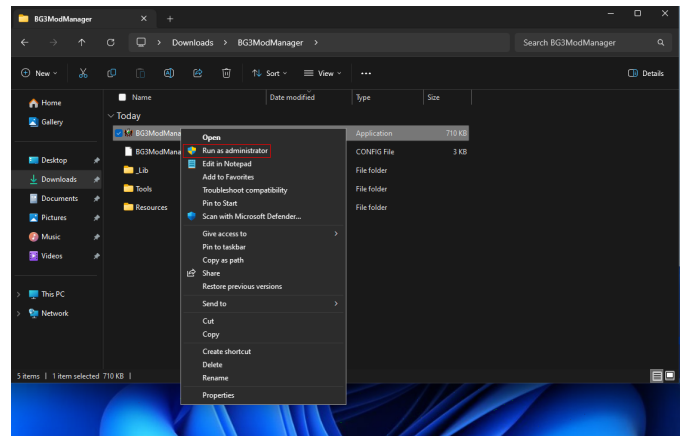

Step 5: Wait for the files to extract.

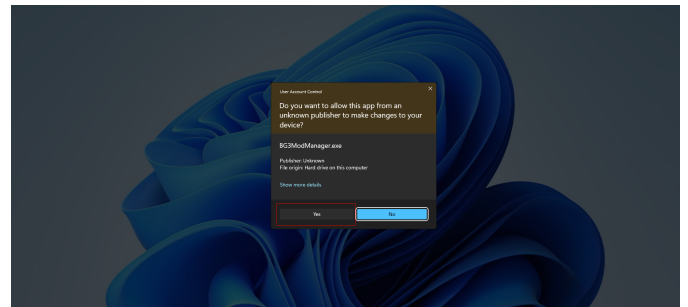

Step 6: You will now have the folder for BG3ModManager open up.

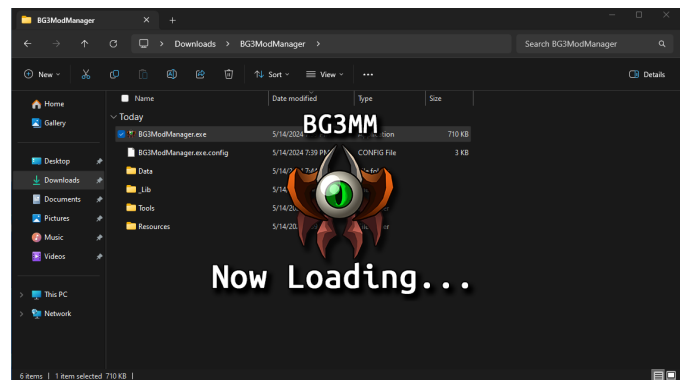

Step 7: Right-click on BG3ModManager.exe and **Run as administrator.**

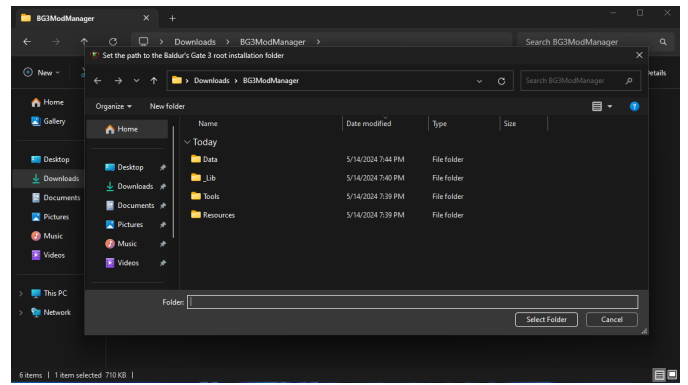

Step 8: You will get a User Account Control prompt. Accept it by clicking on Yes.

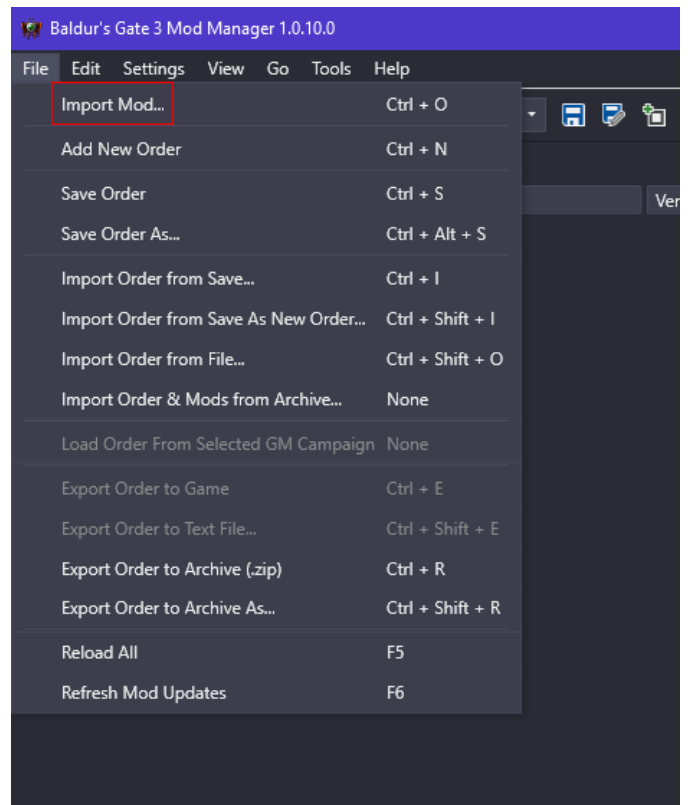

Step 9: The game should detect the path to the game folder for Steam.

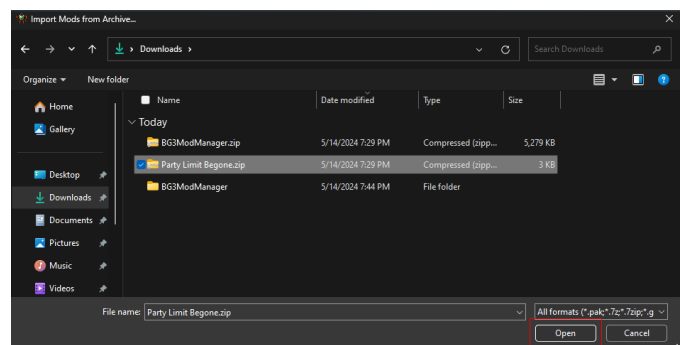

Step 10: If the game does not detect the path to the game folder and pops up with this, navigate to your Steam games directory.

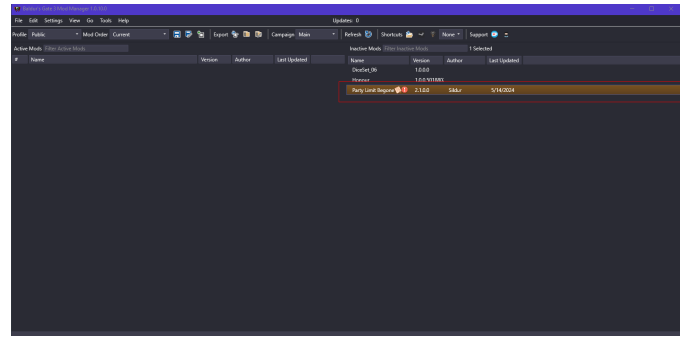

Step 11: Now we are going to import the Party Limit Begone Mod. Click on File > Import Mod...

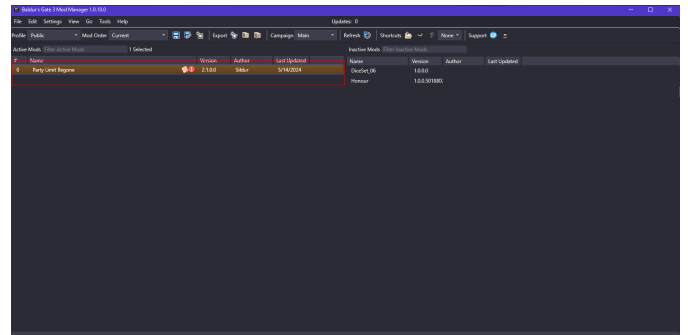

Step 12: Navigate to your Downloads folder and choose the Party Limit Begone.zip file. Once you have clicked on the zip folder, click on Open.

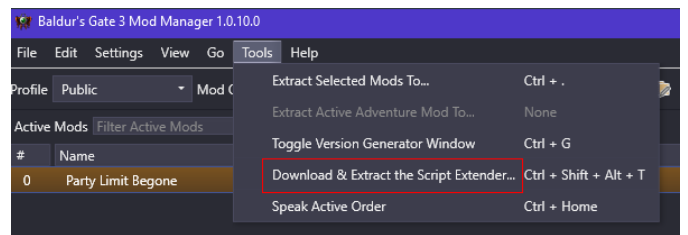

Step 13: Once it is done importing, confirm it imported by checking here:

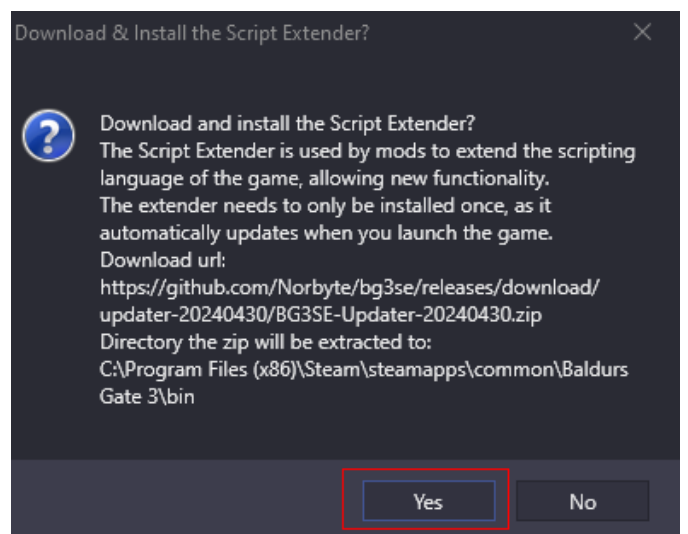

Step 14: If it is on the right of the Mod Manager window, drag it to the left so it is in the Active Mods list.

Step 15: Next click on **Tools > Download & Extract the Script Extender...**

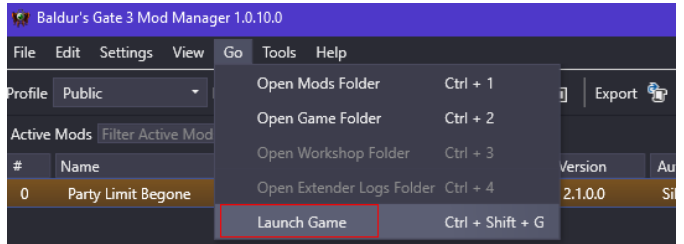

Step 16: Confirm installing the Script Extender by clicking on Yes here.

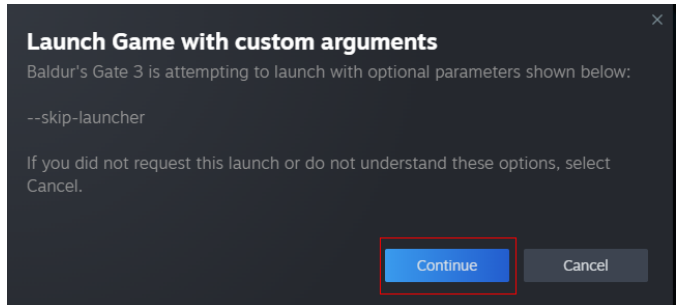

Step 17: You should get this message at the bottom left of the Mod Manager window to confirm the successful installation of Script Extender.

Step 18: After this, test launching the game by clicking on Go > Launch Game

Step 19: If you get this redirect popup to Steam, make sure to click **Continue**.

Step 20: Hopefully it worked, if not, I might have to help you troubleshoot, lol.
